PROFESSIONAL SUMMARY

QA Automation Engineer with 6+ years of manual and automated testing experience at Redis Cloud and in the IDF. Specialized in Playwright and TypeScript automation, REST API and microservices testing, CI/CD quality gates, framework architecture, and AI-assisted testing. Mentored and onboarded 4+ team members and regularly reviewed teammates' code.

SELECTED ACHIEVEMENTS

- **Critical platform migration:** led the E2E automation strategy, adding 20+ new UI and API tests and a three-phase risk-mitigation plan; launched with zero critical regressions.
- **CI failure triage:** built a GitHub Actions workflow that re-verifies failed tests in the nightly critical-path suite to separate flaky failures from real regressions, cutting manual reruns by 30% so the team could focus on real bugs.
- **Microservice QA strategy:** defined the automation strategy for continuous delivery of a new microservice, with E2E tests gating every deploy; reused it for 2+ more services.
- **AI-assisted testing:** used AI tools across the full QA lifecycle: PRD reviews, test-plan design, writing tests, and building automation infrastructure.

EXPERIENCE

QA Automation Engineer · Redis Cloud — Aug 2022 – Aug 2026

- Owned automation and quality strategy in the Billing team: 200+ E2E tests across subscriptions, databases, and service management, running in nightly regression and microservice CI/CD; responsible for billing QA in each two-week cloud release.
- Reviewed PRDs, designed test plans, and wrote UI and API tests (Playwright, TypeScript, SQL); built the automation infrastructure (API clients, helpers) and initiated a Kafka testing framework for the QA group.
- Investigated failures using logs, Playwright traces, CI artifacts, Kubernetes, and deploy context to separate product regressions from infrastructure noise.
- Worked daily with developers, PMs, and managers on test scope, bug triage, and release readiness.
- Reviewed teammates' automation pull requests and mentored a new hire through onboarding, earning positive feedback.

QA Automation Engineer · IDF – Shachar Unit, Lotem — Nov 2019 – Jul 2022

- Lead developer of the unit's first end-to-end automation infrastructure, built in Python and Selenium.
- Trained and onboarded 3+ new developers on the automation framework, including tech leadership and code reviews.
- Ran manual and automated tests across multiple deployment environments, and worked with PMs on test specs, test planning, and bug management (Jira, Agile).

CORE SKILLS

Automation	Playwright, TypeScript, Selenium, Python, test framework architecture, E2E testing
API & Cloud	REST API testing, Postman, microservices testing, SQL, Kafka, Kubernetes
CI & Debugging	GitHub Actions, Jenkins, GitLab, CI/CD quality gates, ReportPortal, log & trace analysis, root-cause analysis, flaky-test stabilization
Engineering	Java, Git, code review, mentoring, pnpm, Jira, Agile, AI-assisted testing
Languages	Hebrew, English

EDUCATION

Basmach QA Certificate · Basmach, Mamram, Ramat Gan — May 2020 – Jul 2020
