◦ CORE SKILLS ◦

Playwright / TypeScript

Python / Selenium

Java / SQL

REST API testing

Postman

Cloud / microservices testing

Test framework architecture

Flaky test stabilization

GitHub Actions / CI/CD

Git / code review

Nx / pnpm

Jira / Agile

Observability/debugging

Root-cause analysis

AI-assisted QA

E2E testing

Manual testing

◦ LANGUAGES ◦

Hebrew

English

PROFILE

Experienced QA Automation Engineer / SDET with 6+ years of manual and automated testing experience, including 4 years at Redis Cloud and 2+ years in the IDF Shachar Unit. Specialized in Playwright/TypeScript automation, REST API and cloud/microservices testing, CI/CD quality gates, test framework architecture, flaky test stabilization, and observability-driven debugging. Known for ownership, collaboration, mentorship, and turning failure evidence into reliable release feedback.

SELECTED ACHIEVEMENTS

- Grew into a key quality owner in the Billing scrum, owning automation decisions and quality strategy for critical revenue-related product flows.
- Designed the E2E automation strategy for a critical billing-platform migration, adding new API capabilities, closing coverage gaps in previously uncovered flows, and creating a 3-phase test and mitigation plan; supported delivery with zero revenue-impacting bugs.
- Built a GitHub Actions workflow that automatically reruns failed critical-path tests, reducing manual intervention and false-negative CI noise.
- Drove CI/CD quality gates for a new billing microservice and added critical E2E coverage, creating the scrum's first successful microservice CI/CD PoC and a reference model for additional services.
- Prepared onboarding and mentoring for a new teammate, helping accelerate ramp-up and improving team cohesion.

EMPLOYMENT HISTORY

QA Automation Engineer / SDET - Redis Cloud

Aug 2022 - Present

- Own automation and quality coverage for Redis Cloud billing, subscriptions, databases, and service-management journeys.
- Build and maintain Playwright and TypeScript frameworks for E2E and REST API coverage with production-like flows, CI evidence, traces, and focused reruns.
- Partner closely with developers and product managers on high-priority billing and subscription releases under tight timelines.
- Stabilize flaky tests and investigate failures across logs, traces, deploy context, and CI artifacts to separate product regressions from test infrastructure noise.
- Use AI-assisted workflows for test development, documentation, and faster debugging while reviewing outputs for correctness and maintainability.

QA Automation Engineer - IDF, Shachar Unit, Lotem

Nov 2019 - Jul 2022

- Led development of the unit's first end-to-end automation infrastructure using Python and Selenium.
- Supported migration from legacy testing libraries, trained new developers, reviewed code, and handled automation and manual testing across multiple deployment environments.
- Worked with product managers on test specifications for new products and application features in Agile methodology; used Jira for bug management and test planning.

EDUCATION

Basmach QA Certificate - Basmach, Mamram, Ramat Gan - May 2020 to Jul 2020

Advanced Automation - INT College - Oct 2020
