PROFESSIONAL SUMMARY

QA Automation Engineer / SDET with 6+ years of manual and automated testing experience at Redis Cloud and in the IDF. Specialized in Playwright and TypeScript automation, REST API and microservices testing, CI/CD quality gates, framework architecture, flaky-test stabilization, and observability-driven debugging.

SELECTED ACHIEVEMENTS

- Designed the E2E automation strategy for a critical billing-platform migration, closed coverage gaps, and created a three-phase mitigation plan; supported a successful launch with no known revenue-impacting regressions at release.
- Built a GitHub Actions workflow that automatically reruns failed critical-path tests, reducing manual intervention and false-negative CI noise.
- Drove CI/CD quality gates and critical E2E coverage for a new billing microservice, creating a reusable reference model for additional services.
- Owned automation decisions and quality strategy for critical revenue-related product flows in the Billing scrum.

EMPLOYMENT HISTORY

QA Automation Engineer / SDET - Redis Cloud

Aug 2022 - Present

- Own automation and quality coverage for Redis Cloud billing, subscriptions, databases, and service-management journeys.
- Build and maintain Playwright and TypeScript frameworks for E2E and REST API coverage with production-like flows, CI evidence, traces, and focused reruns.
- Partner with developers and product managers on high-priority billing and subscription releases.
- Stabilize flaky tests and investigate failures across logs, traces, deploy context, and CI artifacts to separate product regressions from infrastructure noise.

QA Automation Engineer - IDF, Shachar Unit, Lotem

Nov 2019 - Jul 2022

- Led development of the unit's first end-to-end automation infrastructure using Python and Selenium.
- Supported migration from legacy testing libraries, trained developers, reviewed code, and performed automated and manual testing across multiple deployment environments.
- Worked with product managers on Agile test specifications, bug management, and test planning for new products and application features.

CORE SKILLS

Automation: Playwright, TypeScript, Selenium, Python, test framework architecture, E2E testing, manual testing

API and cloud: REST API testing, Postman, microservices testing, billing systems, SQL

CI and debugging: GitHub Actions, CI/CD quality gates, observability, root-cause analysis, flaky-test stabilization

Engineering: Java, Git, code review, Nx, pnpm, Jira, Agile, AI-assisted QA

Languages: Hebrew, English

EDUCATION

Basmach QA Certificate - Basmach, Mamram, Ramat Gan (May 2020 - Jul 2020)

Advanced Automation - INT College (Oct 2020)
